

Hello, Anesthesia Provider...

Are you tired of having to perform **jaw thrusts** over and over with your patients under moderate or deep sedation?

Are you tired of constant **O2 desaturation** during moderate or deep sedation?

Are you tired of having to put in an **oral airway** with patients that keep obstructing and desaturating during moderate or deep sedation?

Are you tired of the Gastroenterologist saying, "**Do something about the breathing**, the colon is moving all over the place, I can't get this polyp!"?

Anesthesia Providers should have a simple, non-invasive device that passively generates positive pressure to eliminate airway obstruction.

Well, now they do....

It's called the xchange™

Place the xchange™ nasal dock under the patient's nose, adjust the wall oxygen and welcome to the new practice of 'HANDS FREE PEEP'.

 **Order Code: PX-XCS-20**

 **xchangebypneuma.com**

**Positive pressure perfected.
For patients who need it the most.**
